

Taking a temperature sample

Measurement results can be recorded in two ways

1. Using the KitchenHelper app, either with wireless measuring devices or by manual entry
2. Manually in the SmartKitchen service using a web browser.

1. Recording with the KitchenHelper app

KitchenHelper app

KitchenHelper is an Android app used for making HACCP records.

Taking a measurement:

1. Open the KitchenHelper app
2. Select "Temperature sample"
3. Switch on the measuring device using the power switch
4. Select the measuring device you are using or "Enter manually"
5. Select the person taking the measurement, sampling point, group and item.
6. Insert the probe into the item to be measured
7. Select "Save"
8. Add a comment if needed

2. Recording a temperature sample in a web browser

This requires permission to log in to the SmartKitchen service using your web browser.

Taking a measurement:

1. Select "Samples"
2. Select the sampling point
3. Select "Add the sample result manually"
4. Select the person taking the measurement, group and item.
5. Select "Save".
